

Create Security & Savings with Check Printing Intelligence

SecureCheck-PRO

MICR Check & Form Printing System

The SecureCheck-PRO MICR check and form printing system is designed to meet today's requirements by improving both the security and functionality of an organization's check disbursement process.

The system also has the capability to automate check-account, printer, and tray selection, as well as many other manual tasks, such as sorting and duplexing, to streamline your process.

Improve Check Printing Productivity

SecureCheck-PRO offers functionality designed to create significant time-and-cost savings for your check and form production.

You can print checks for any number of checking accounts using same blank stock, allowing you to eliminate the need to purchase and secure pre-printed stock. Print Payroll and Accounts Payable checks to the same blank stock, and automatically apply signatures during printing based on the check amount.

Secure Your Check Printing Process

In addition to enhancing productivity, SecureCheck-PRO is designed to prevent fraud at every stage of check processing.

State-of-the-art features such as event notifications, audit trails, and event logs allow you to add security and controls to your check printing process. In addition, all checks produced with SecureCheck are printed on blank stock, which is devoid of all check printing information except the stock's embedded security features. SecureCheck-PRO also offers the capability to add printed-check security features to each check you disburse for even greater protection from alteration and duplication.

In addition to checks, you can print all your internal forms with SecureCheck-PRO - W-2s, 1099s, and more. Making changes to check or form information can be managed easily and securely from the Printing Control Center (PCC) host.

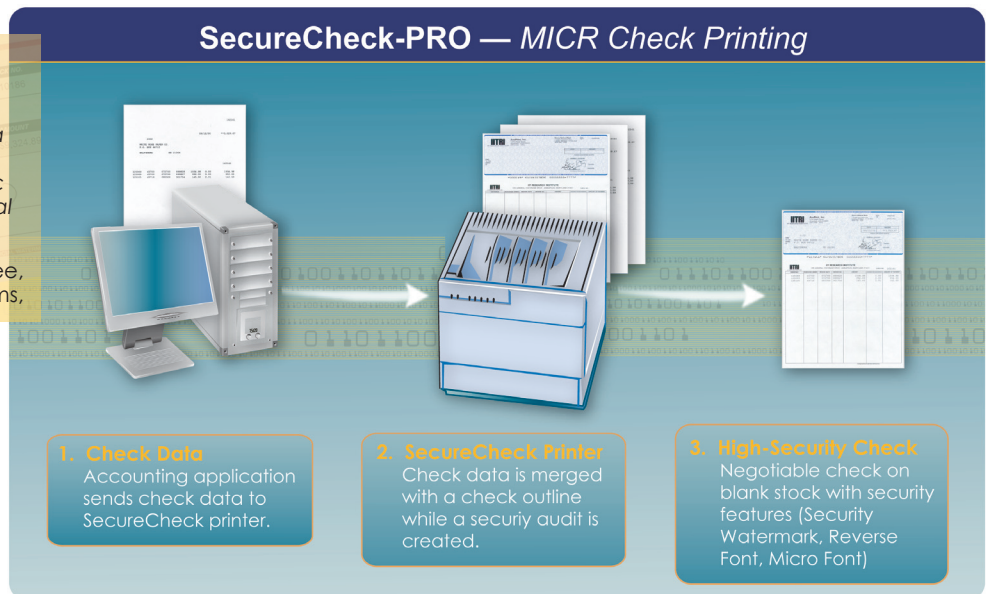

"SecureCheck lets us easily process checks for 15 different companies. We've eliminated a check-signing machine. Now we have automatic signatures, plus additional security."

Roberta Hightree,
HunTel Systems,

"We like the security aspect of not having blank check stock lying around and the simplicity of not bursting checks ... It's a great solution for low-volume check runs."

Elizabeth Beach,
ITI

SecureCheck-PRO — MICR Check Printing

Your accounting application data is merged with the correct check outline to create finished checks on blank security check stock.

Administer Everything from the Secure Printing Control Center

The Printing Control Center (PCC) provides an interface for all system administrative functions.

Multiple Checking Accounts

Create form-graphic overlays for any number of checking accounts. The form-graphic overlay offers 10 form text objects and 6 graphic objects per page - for a high level of flexibility in overlay creation. The Administrator controls all modifications to check-account information.

Signature Logic

Define how many signatures (one, two or no signatures) are printed on a check based upon the check's dollar amount. Each checking account can have its own logic pattern.

Automatic Check-Account and Printer Selection

Automate selection of the correct check-account overlay, printer, and/or tray. With automatic check-account selection, print mixed-account check runs and even print mixed-account check runs to multiple printers.

Sorting

Perform up to a three-level sort of checks before printing. The sort can be based on zip, check number, and/or payee name.

Manual Checks

Manually print a checks without accessing your accounting package. Quickly access previously entered names and addresses with a payee address book.

No More Pre-Printed Forms

Create all your internal forms with SecureCheck-PRO. Save up to 70% on form production and also eliminate secure storage requirements for pre-printed forms.

Create a Secure Printing Process

SecureCheck-PRO enhances your check printing security with features that add both convenience and internal controls to your process:

Audit Trail

SecureCheck-PRO offers the most powerful audit capacity available. Specify up to 11 auditable fields (payee, amount, check date, check number, account, zip, +5 additional audit fields of your choice), and each time checks are printed an audit trail will be captured and securely stored at the PCC host.

Security Watermark

Print a security watermark across the face of your checks. The watermark contains the payee name and amount, and you customize the settings for line spacing, pitch, and grayscale.

Security Fonts

For greater security, print the check amount in Reverse Font or Micro Font in a second location on your checks.

Security Permissions

Six levels of security permission can be assigned in any combination for each SecureCheck user.

Remote Double-Login requirements are also assignable, where an administrator is notified and must log in with a

user before the user is granted program access.

Event Notifications

Option

Email notifications can be sent to specified recipients to keep them informed of important check printing activity. These notifications can include any of the following:

- Notice that check printing has occurred (includes account and printer)
- Notice that check printing has occurred, along with one of two audits: Detailed or Summary
- Notice to administrator of excessive failed logins
- Notice for checks over specified amounts
- Notice to administrator regarding overlay changes

Secure-Image™ Check Imaging

Option

With Secure-Image, keep an exact replica of each printed check in .pdf format. Eliminate the need to print copies. Archive images of your checks as they are being printed. User can adjust the location, orientation, and content of the watermark that is placed on the images. Images are attached to the audit file for later review and re-printing as needed.

SecureCheck-PRO Specifications

Host PC

Pentium III or higher processor is recommended

Operating System: Windows 2000, Windows XP/Pro, Windows Server 2000 & 2003, Vista

128 MB of RAM minimum

SVGA color monitor, 800 * 600 res. capability (1024 * 768 res. recommended)

Print Stream

Generic Text - ASCII or PCL 5e

Printer Compatibility

Software-Only Configuration:

PCL 5e-compatible laser printers, including Hewlett Packard, Lexmark, Cannon, and many more.

Software-Firmware Configuration:

Current Models:

4240, 4250, 4350, 9050

Previous Models:

2420, 2430, 4100, 4200,

Note: Older HP printer models may also be compatible but with loss of some of newer functionality.

The system can be set up as a stand-alone or networked solution. If networked, SecureCheck can be accessed by multiple users locally and remotely for check processing and printing.
